

Maintenance Instructions

Do not use bathroom surface cleaners or abrasives to clean tiles or grout

Always dry dampness off walls and sealants after using shower, with a dry white towel

Ventilate, the bath / shower room as much as possible when using shower i.e. opening windows, use of extractor fans, etc

Apply 2 coats of grout sealer once per year to the grout. This helps prevent discoloration and dampness getting behind tiles. Grout seal must be applied within two weeks after the tiles have been regouted.

Showers can be used 24 hours after they have been regouted. All newly regouted areas must be kept dry for at least twenty four hours with the exception of floor tiles, which must be kept dry for 72 hours

Do not touch silicone seals for at least two hours after they have been applied

The bath can be used as normal two hours after the job is being completed

To clean the tiles, we recommend a small amount of detergent in warm water. A white cloth or sponge must be used.
